**January 2017; 4: 1: 2017**

*We are pleased to re-launch our online, peer – reviewed International Journal, namely Clinical and Experimental Homeopathy. I would like to thank all the authors and reviewers for their work and considering our journal to publish.*

*Research in Homeopathy has been more updated during the past few years, and understanding the homeopathic dilution has been easier. There are some benchmark work from Sukul Institute particularly emphasizing the water structure and its property. Using homeopathy medicines in plants is now becoming popular and we several experiments indicating the positive response of human medicines in plant bodes. Experiments have also been conducted in the rice field as well as in the earthen pots in our garden. Critics say, homeopathy is a placebo effect and I believe, for them the results of the plants’ experiments are of good answer. Plants do not have nervous system and hence they do not have mind and hence, they do not have the opportunity to have a placebo effect of the homeopathy medicine. There are some good responses on critical diseases like Cancer and neurological disorders where the Conventional medicines fail to provide relief to the patients. Homeopathy in most of such cases found to be effective and could ameliorate the severe pain that the cancer patients are suffering.*

*The Government of India has extended the full support to grow homeopathy further in India. There have been some good quality medicines have come up and both patients and doctors are happy using these. As a industry it I sreally a fast growing market and in near future homeopathy will surplus the conventional medicine. People are now well aware of the undesired effects of conventional medicines and they tend to shift toward this alternative system of medicine.*
